

# Johnson City Transit Trip Planner

Johnson City Transit has partnered with Google Transit, a public transit trip planning feature of Google Maps. JCT's schedule data can now be accessed via Google Maps, giving riders' step-by-step trip planning from their desktop computers, laptops, tablets, or smartphones. Johnson City is among the first transit systems in the state to join Google Transit.

This feature allows you to plan your bus route by entering the date and time that you would like to arrive at your destination or begin your trip. The trip planner will provide three options with the travel time and number of transfers. Simply put your starting location in the start field and your arrival destination in the end field. Add your destination or arrival time and click Get Directions. If you do not receive directions, you may need to list Johnson City, TN within the option fields to narrow the search. Google Maps also provides walking directions to assist you in reaching your destination once you get off a bus and has street views to help you find the closest transit stop and become familiar with your destination before you get there.

All of this information and more can be found at [www.ictmyride.com](http://www.ictmyride.com) or [www.johnsoncitytransit.org](http://www.johnsoncitytransit.org)

The screenshot shows the Google Maps 'Get transit directions' interface. It features two input fields for starting point (A) and destination (B), both with callout boxes stating 'Enter starting point by address or business name.' and 'Enter destination information by address or business name.' respectively. Below these are fields for 'Leave' (a dropdown menu), '11/20/15', and '3:05pm'. A 'Prefer' section contains two dropdown menus: 'Best route' and 'Bus'. A 'Get Directions' button is at the bottom right. Callout boxes also explain the 'Leave' field: 'Select leave or arrival. Select date and desired time.' and the 'Prefer' section: 'Select preference: Best route, fewer transfers, or less walking.'
